

## Experiment 1

**Student Name:** Abhishek Sharma

**Branch:** BE CSE

**Semester:** 6<sup>th</sup>

**Subject Name:** Full Stack Development-II

**UID:** 23BCS12330

**Section/Group:** 23BCSKRG\_3A

**Date of Performance:** 12/01/26

**Subject Code:** 23CSH-309

### 1. Aim:

To design and implement the foundational frontend architecture of the EcoTrack application using modern React practices, Vite tooling, and ES6+ JavaScript features.

### 2. Objective:

- To set up a React project using Vite with proper project structure
- To understand component-based architecture in React
- To apply ES6 array methods (map, filter, reduce) for data-driven UI rendering
- To separate concerns using components, pages, and data modules

### 3. Implementation/Code:

#### logs.js:

```
export const logs = [  
  { id: 1, activity: "Car Travel", carbon: 1 },  
  { id: 2, activity: "Electricity Usage", carbon: 6 },  
  { id: 3, activity: "Cycling", carbon: 5 },  
]
```

#### Dashboard.jsx:

```
import { logs } from '../data/logs'  
  
const Dashboard = () => {  
  const totalcarbon = logs.reduce((total, log) => total + log.carbon, 0)  
  
  return (  
    <div className="dashboard">  
  
      <header>
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
<h2>Dashboard</h2>
<p>
  Total Carbon Footprint: <strong>{totalcarbon} kg CO2</strong>
</p>
</header>

<ul>
  {logs.map((log) => (
    <li key={log.id}>
      {log.activity} - {log.carbon} kg CO2
    </li>
  ))}
</ul>
</div>
)
}

export default Dashboard;
```

## Logs.jsx

```
import { logs } from '../data/logs'

const Logs = () => {
  const highimpactlogs = logs.filter((log) => log.carbon > 4)
  const lowimpactlogs = logs.filter((log) => log.carbon < 4)

  return (
    <div>
      <h2 style={{ background: 'red', color: 'white', textAlign: 'center' }}>
        High Carbon Activities (> 4)
      </h2>
      <ul>
        {highimpactlogs.map((log) => (
          <li key={log.id}>
            {log.activity} = {log.carbon} kg CO2

</li>
        ))}
      </ul>
    </div>
  )
}
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
</ul>
</div>

<div>
  <h2 style={{ background: 'green', color: 'white', textAlign: 'center' }}>
    Low Carbon Activities (&lt; 4)
  </h2>
  <ul>
    {lowimpactlogs.map((log) => (
      <li key={log.id} style={{ color: 'green', fontWeight: 'bold' }}>
        {log.activity} = {log.carbon} kg CO2
      </li>
    ))}
  </ul>
</div>
</>
)
}

export default Logs
```

## 4. Output:

### EcoTrack

#### Dashboard

Total Carbon Footprint: **12 kg CO2**

- Car Travel - 1 kg CO2
- Electricity Usage - 6 kg CO2
- Cycling - 5 kg CO2

#### High Carbon Activities (> 4)

- Electricity Usage = 6 kg CO2
- Cycling = 5 kg CO2

#### Low Carbon Activities (< 4)

- Car Travel = 1 kg CO2

## 5. Learning Outcome:

**DEPARTMENT OF**

**COMPUTER SCIENCE & ENGINEERING**

Discover. Learn. Empower.

- Gained hands-on experience in **creating and organizing a React project with Vite**, using structured folders such as components, pages, and data.
- Developed a **component-based UI**, building distinct pages like **Dashboard** and **Logs** for better separation of concerns.
- Implemented **dynamic UI rendering** by using **ES6 map()** to display activity logs from a dataset.
- Utilized **ES6 filter()** to efficiently categorize activities into **high-carbon** and **low-carbon** groups.
- Applied **ES6 reduce()** to calculate the **total carbon footprint** and present summarized results on the dashboard.
